

Environmental Policy

We recognise the impact that businesses can have on the environment. That's why we are determined to improve our performance to minimise any negative effects from our firm.

Over the years we have made a number of significant changes such as reducing waste disposal, paper consumption and printer cartridges as well as switching off lights and appliances that are not in use.

We are committed to not only complying with the relevant environmental legal requirements but exceeding them. We take climate change very seriously and are continuously improving our standards and refining our environmental policies to prevent pollution.
